How to Find the MAC Address on Your Device

Windows

- Click on the **Windows Start** key (bottom left-hand corner of the screen) to open the Windows menu.
- Type "cmd" in the **search box** on the bottom of the Windows menu and press **enter** to launch the command prompt. A black box will open. (For Windows 10, type "cmd" in the search box, then select the Command Prompt desktop app.)
- Type in **ipconfig /all** and press **enter**.
  - You will see the results for all Network Devices installed on your computer.
- Locate the device you need the Physical Address (MAC address) for. Typically you will be looking for
  - Wireless Adapter: will typically appear as "Wireless LAN adapter Wireless Network Connection"
- Locate the line "Physical Address . . . . : XX-XX-XX-XX-XX-XX" under the desired adapter.
  - XX-XX-XX-XX-XX-XX will be a series of letters and numbers (i.e. "A4-BA-DB-E8-2E-E1").

Mac OS 10.6

- Open **System Preferences**
- Select the **Network** icon
- Choose the **Airport Connection** for the wireless network adapter
  - Click the **Advanced** button
  - Select the **Airport** tab at the top of the screen
  - The **Airport ID** is the MAC address, or for 10.7 users, the WiFi address

Mac OS 10.7

- Open **System Preferences**
- Select the **Network** icon
- The **Wi-Fi Address** is the MAC address

iPhone / iPod Touch / iPad

- Go to **Settings**
- Go to **General**
- Go to **About**
- The **Wi-Fi Address** is the MAC address

Android Mobile OS

- Go to **Settings**
- Go to **About Phone**
- Go to **Status**
- The **Wi-Fi MAC Address** is listed

Note: Some Android devices require your Wi-Fi to be activated before displaying your MAC Address.

BlackBerry (Newer Models)

- At the **Home** screen, press the **Menu** key.
- Locate and select the **Options** icon
- The **WLAN MAC** is the MAC Address.
